Technical Appendix

This technical appendix accompanies the research report, *Local Suicide Prevention Planning in England*, produced by Samaritans and University of Exeter in May 2019. The following tables present data for all questions featured in the self-assessment survey of local authority staff responsible for suicide prevention.

Interpreting the survey data:

National tables

Some tables include 'system missing' data – this represents those who skipped the question or those for whom the question did not apply.

Regional tables

In the regional tables for questions asked of all respondents there is a row called 'No regional data'. This row contains nine cases:

- seven respondents who completed the survey but withheld information about their LA name or region
- two local areas (152 150 = 2) that did not respond to the survey

By a process of elimination, it was possible to identify these nine local authorities and the geographical regions they are in, but it was not possible to identify specifically which line of data relates to each local authority. For this reason, we have created the 'No regional data' row. Including this row means that even though a 100% response rate was not achieved, the percentages in the rows for the answers given can still be calculated out of the total number of local authorities in each region, thereby giving a more accurate view of local level suicide prevention in each region.

For regions such as East Midlands where 100% of local areas responded to the survey in full, specific percentages are reported (i.e. 100% of local areas in East Midlands have a multi-agency group). However, for regions such as North West in which there is some missing data, a percentage range is provided instead. For example, the data identify that 91% of local areas in this region have a multi-agency group, no data is available for 4% (1 LA) of this region. In this instance data are reported as follows: between 91% (21) and 95% (22) of local areas have a multi-agency group.
